
Yevhen (Eugene) Boiko

Solution Architect | Hands-on Engineering Leader

Ukraine | Remote | jeyboy1985@gmail.com
linkedin.com/in/eugene-boiko | github.com/jeyboy

Solution Architect with **15+ years of experience** building SaaS, AI, MedTech, InsurTech, FinTech, and enterprise platforms. Combine system design and engineering leadership with hands-on development, from requirements discovery through deployment and production support.

Technical focus: Python, TypeScript and Node.js, Ruby on Rails, React, AWS, GCP, PostgreSQL.

PROFESSIONAL EXPERIENCE

COR-Software

Mar 2025 - Present

Solution Architect and Lead Full-Stack Engineer

Fractional | Remote

- Built a greenfield ERP and finance platform as the **primary application engineer**, owning business analysis, architecture, implementation, automated testing, and release validation.
- Designed multi-company cash-basis accounting, AP/AR, inventory, fleet and fuel, asset, CRM, and document workflows with **server-enforced access control** and audit trails.
- Integrated PUMB, PrivatBank, and Monobank. Automated statement retrieval where bank APIs were available and added configurable classification rules to **reduce manual downloads and categorization**.
- Designed bank-specific parsing schemas with **duplicate detection** based on native payment IDs or configured field combinations. Retained **preview/commit imports** for beta validation and fallback, showing parsing results, account and category assignments, duplicate matches, and planned record restorations.
- **Launched a private beta** serving multiple businesses and hundreds of monthly transactions. Work with DevOps, mentor a trainee, and extend employee military records using immutable, versioned data.

Technologies: Python, FastAPI, SQLAlchemy, Alembic, PostgreSQL, React, TanStack, Playwright, unittest

GlenFlow

Dec 2021 - Present

Venture Studio and Portfolio Companies | Remote / United States

Senior Software Engineer

Aug 2024 - Present

Head of Engineering / Director of Technology

Dec 2021 - Jul 2024

The leadership role ended when its business line closed. Employment continues; currently without an active project assignment.

ScaleGlide AI Initiative

Feb 2024 - Feb 2025

- Led a **six-person team across four client pilots**, owning requirements, architecture, implementation, and integration. Reduced typical delivery time for working pilots from **approximately four weeks to two** through reusable workflow orchestration.
- Designed a **Node.js workflow DSL** and implemented the complete JumpStart core underpinning GlenFlow Engine. Enabled a dedicated prompt engineer to compose branching and parallel workflows and update scenarios **without redeployment**.
- Implemented cross-model response validation, output-format checks, configurable retries, and model fallback. **Persisted request states and an execution tree** to inspect problematic branches and retry failed requests without rerunning completed work.

Technologies: Node.js, AWS Lambda, OpenAI, Anthropic, AWS Bedrock; cloud and on-premises deployment

PROFESSIONAL EXPERIENCE CONTINUED

GlenFlow portfolio projects

OxyDial MedTech Platform

Mar 2023 - Nov 2024

- Led a **six-person engineering team** and owned architecture and delivery of a cloud SaaS platform for oxygen-hemoglobin equilibrium curve testing.
- Developed numerical processing to **reduce measurement noise and improve curve accuracy**, incorporating reagent coefficients and tuning iteration counts to accelerate calculations.
- Investigated **Levenberg-Marquardt fitting** for sigmoidal curve reconstruction from smoothed measurements. Validated numerical results against manual calculations, reference values, and other software using **P50/P90 deviations** and visual curve overlays.
- Delivered automated device-data ingestion, cloud storage and backup, analytical dashboards, reporting, CSV exports, audit trails, and remote research collaboration.
- Deployed the web platform in the company's research and validation environment. Its web and numerical-processing components contributed to a broader medical measurement process for which the company **filed a patent application**.

CmySkills Job Platform

Feb 2022 - Jul 2024

- Served as **Tech Lead in a four-person team**, working across backend, frontend, and cloud architecture. Helped bring the platform to production and supported its evolution before transition to new ownership.
- Co-designed an **event-driven serverless architecture** on AWS using Lambda, S3, SQS, and SNS.
- Built one-click publishing so employers could distribute vacancies, company news, and other content to relevant communities on Facebook, Twitter/X, and Instagram.

Technologies: TypeScript, Node.js, NestJS, Next.js, React, AWS, PostgreSQL, AI integrations

CONTRACT ENGAGEMENTS

Wingspan

Nov 2024 - Mar 2025

Senior Full-Stack Engineer

Contract | Remote

- Delivered production fixes and incremental improvements across contractor lifecycle and financial workflows within a distributed product organization of more than 80 people.
- Implemented **gRPC service-to-service communication** for selected workflows and **server-side PDF generation** within an established production codebase.

Technologies: TypeScript, Node.js, React, GCP, gRPC, OpenAPI, Jest

Livegenic

Jul 2019 - Dec 2021

Full-Stack Software Engineer

Contract | Remote

- Maintained and extended a Rails and React InsurTech platform as part of a 30-person product team, resolving production defects and delivering incremental features.
- Worked across live video claims inspection, document workflows, customer communication, and third-party contractor-management capabilities.

Technologies: Ruby on Rails, React, TypeScript, SQL

EARLIER EXPERIENCE

Freelance Software Engineer

Dec 2013 - Jun 2019

Upwork and Direct Clients

Remote

- **MonitorHealth:** Designed a custom MQTT telemetry protocol for cardiac-monitoring devices, including packet structure and checksum integrity validation for de-identified data. Implemented the Ruby communication layer for real-time device exchange. The system was subsequently completed and released with an initial production batch of **50 devices**.
- **RebelsMarket:** One of three engineers maintaining and extending a Rails e-commerce platform. Delivered cart, form, and storefront improvements, seasonal campaigns, promotional pricing, discount logic, and supplier catalog ingestion.
- Contributed to similar-product matrices, personalized recommendations, caching, asynchronous processing, hosting, and image storage for RebelsMarket.

Technologies: Ruby on Rails, AWS, S3, Redis, Sidekiq, SQL

FacelT

Jun 2010 - Dec 2013

Ruby on Rails Developer

On-site / Remote

Developed and maintained Rails applications, optimized database queries, modernized legacy functionality, and resolved production and data-related issues.

TECHNICAL SKILLS

Languages and backend: Python, FastAPI, SQLAlchemy; TypeScript and JavaScript, Node.js, NestJS; Ruby, Rails, Sinatra; SQL.

Frontend: React, Next.js, TanStack, HTML5, CSS3, Tailwind CSS, Bootstrap, Ky, Formik.

Architecture and APIs: Distributed systems, microservices, event-driven and serverless architecture, multi-tenant SaaS, integration design, REST, gRPC, OpenAPI.

Cloud: AWS Lambda, S3, SQS, SNS, API Gateway, Secrets Manager; GCP Cloud Functions and BigQuery.

Data: PostgreSQL, Redis, MongoDB, MySQL, SQLite, Alembic.

Testing and delivery: Playwright, Jest, unittest, API testing, code review, Git.

Integrations: OpenAI, Anthropic, AWS Bedrock, MQTT, Twilio, SendGrid, Yjs and CRDT.

Additional development: C++, Java, Bash, Qt, FFmpeg.

SELECTED PROJECTS AND OPEN SOURCE

- **Collaborative Diagram Builder:** Architecting a web diagramming platform with real-time collaboration, concurrent-state resolution, and single and chained object animations. Private repository; demo and architecture review on request.
- **Ruby libraries:** Created and maintained ActionmailerX509 for X.509-signed and encrypted email, and NPPES for external API integration.
- **Playo3:** Built a cross-platform media application using C++, Qt, and FFmpeg, with global hotkeys and custom data-source integrations.

EDUCATION AND LANGUAGES

Master's Degree in Software Systems

Zaporizhzhya State Engineering Academy, Ukraine

Faculty of Computer Science and Technology

Ukrainian: Native | **Russian:** Native | **English:** B2 / Upper-Intermediate
